

Your name:

Brilliant Birds

KS1/2

- ✓ All birds are covered in feathers
- ✓ All birds lay eggs
- ✓ All birds have wings

1. Draw a picture of your favourite feathery bird in the park:

2. Use the signs to fill in the boxes below about the bird you have just drawn:

What species of bird is it?

Which habitat do they live in?

What do they eat?

Owls

There are over 200 species of owls. They can be found living on every continent except Antarctica.

3. Label the owl, by drawing an arrow from the word to the body part on the picture below:

Wing

Talon

Eye

Beak

Penguins

4. How many penguins can you see? Count the penguins and write the number in the box:

5. Penguins live in large groups called colonies. Discuss with a friend why you think it would be a good idea for penguins to live in a large group.

Parrots

6. Parrots have hard hook shaped beaks. Watch the parrots carefully, what do they use their beaks for? Write or draw your answer below:

7. Where do parrots live in the wild? Circle your answer below:

Ocean

Forest

Desert

Endangered Birds

Animals in the wild are struggling to find enough food and space to survive.

When there are not many of an animal left, we call it endangered.

Animals which have nearly gone forever are called critically endangered.

Animals which do not live in the wild anymore and only survive in zoos are called extinct in the wild, and animals which are gone forever are called extinct.

Zoos like Birdworld are here to save animals from the brink of extinction by providing a safe home for them to live. We also share how to save these animals with our visitors.
